

# Data Warehouse Design Assignment

## Design Process

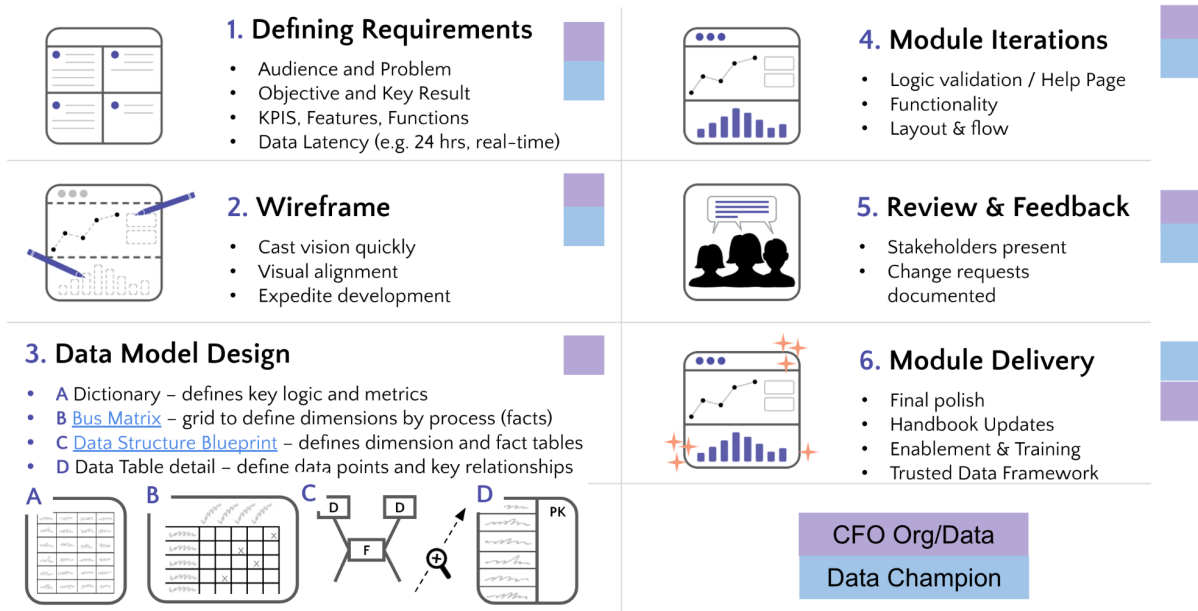

*Source: Course Material*

### *Four-Step Dimensional Design Process*

The four key decisions made during the design of a dimension:

1. Select the business process.
2. Declare the grain.
3. Identify the dimensions.
4. Identify the facts.

# Questions

Details in requirement document (6)

1. Job and Shipment Performance and Trends
  - a. Job Revenue (per Location, over Time)
  - b. Sales Agent Productivity (from Leads to Jobs, over Time)
  - c. Production Trends for Jobs for Entities (time to subjob production)
  - d. Shipment Trends for Jobs (contract time to shipment) (compared to shipment promised dates and first shipping dates)
2. Invoice Trends
  - a. Highest Invoice Amounts (over Time)
  - b. Trends for Invoicing of Job Amounts for Entities (time to invoice) (over Time)
  - c. Returns (difference between invoice quantity and shipping quantity) for Products, Machines, and Locations
3. Financial Performance
  - a. Gross Margins (per Location)
  - b. Locations Gross Margins Variation by Forecast/Budget (per Month)
  - c. Products Most Difficult to Forecast
  - d. Most Profitable Products and Locations (over Time)

## Business Process, Dimensions, Measures

## Summarizability

No known problems might arise because I designed them with a more complex integration schemes in mind, so that:

- It's *complete* at the finest grain, that is all information needed is there. `NOT NULL` is safe to be given in all columns. Therefore, **incomplete relationship might not happen**
- There's no *non-strict dimension-fact relationship*, because
  - I'm making sure each row is *single-valued* (1NF)
  - There's no *many-to-many* relationship in the source data, so no further M-N simplifications are required
